

Summary of research proposal LROI

Title:

Merging arthroplasty databases: a comparison of patient, procedure and prosthesis characteristics of primary total and unicondylar knee arthroplasty from 2010 to 2020 between the Dutch Arthroplasty Register (LROI) and the Nordic Arthroplasty Register Association (NARA).

Abstract:

In this study we will build on the recent collaboration between the Dutch Arthroplasty Register (LROI) and the Nordic Arthroplasty Register Association (NARA). We want to combine the LROI data set to the NARA dataset for total and unicondylar knee arthroplasties using data from 2010 to 2020 in order to examine the differences in patient, procedure, and prosthesis characteristics of Dutch, Swedish, Danish, Norwegian and Finnish knee replacement surgery.
