Title:

Does a high BMI/tibial component size-ratio influence the survival after total knee arthroplasty

Authors:

C.R. Quispel, N.M.C. Mathijssen, T. Duivenvoorden, H. Verburg,

Abstract:

We want to investigate whether patients with a high BMI and a small tibial component have a worse survival than patients with a lower BMI or a bigger tibial component. For this reason we will calculate the BMI/ tibial component size ratio.
